

InfoWave - the Next Big Wave in Mobile Computing and Communications

Singapore, 8 January 2003 – InfoWave Pte Ltd (InfoWave), a joint-venture between ST Electronics (Info-Comm Systems) Pte Ltd (formerly known as CET Technologies Pte Ltd), Trek 2000 & Melodeon, started operations in August 2002. It specializes in the design, development and supply of mobile computing platform and wireless communication technologies, especially in the areas of telematics and mobile data terminals.

With strong global partners like Solectron and NEC, InfoWave has started delivering products and solutions to global clients. InfoWave's Waveon 728 has recently been deployed in FME Onyx mechanical sweepers. Onyx is the largest waste management operator in Asia, with 22 road sweepers and litter collecting machines cleaning the streets in central Singapore all equipped with the Waveon 728.

InfoWave's first global customer is Delphi Automotive System, a Fortune 100 company with a turnover of more than US\$25 billion. In further collaboration with Delphi, InfoWave also supplied the DataWave and DataWave Plus for Delphi's Telematics Solutions that was launched in Consumer Electronics Show 2003.

InfoWave's extensive range of products includes handheld ruggedized PDAs, payment terminals, web-pads, and ruggedized PC tablet. In the Telematics arena, InfoWave's complete range of products caters from simple GPS/GPRS tracking devices to sophisticated in-vehicles telematics system. The company's Waveon 700 range of products is suitable for trucks, taxis, buses, recovery vehicles. The Waveon 900 series is targeted at military, police, ambulances and fire services.

MPC Elite - A World-Class Product for Delphi

Delphi introduced the Mobile Productivity Center Elite (MPC Elite) at the Consumer Electronics Show 2003 at Las Vegas in January 2003. InfoWave and Solectron have partnered to deliver MPC Elite for Delphi in a very short schedule. "Delphi is very glad to work with InfoWave on the development of MPC Elite project. This is an important kick-off for us into consumer vehicular telematics, and we are able to meet the objectives despite the tight schedule. We intend to partner with InfoWave for more telematics

products and solutions for the US and global markets." said Don LaDieu, Director of Consumer Electronics, Delphi Corporation.

The MPC Elite is an after-market, semi-portable device intended for use in the interior of automobile. It provides a sophisticated voice interface that allows the driver to interact with personalized data from a variety of sources, such as PDA, PC or off-board telematics services provider. The unit is able to support data delivery via dial-up networking on a supported mobile phone or via broadband 2.5G/3G mobile phone.
