**InfoWave Achieves ISO 9001:2000 Certification for Quality Management**

**Singapore, November 1, 2007** – InfoWave Pte Ltd (“InfoWave”) wishes to announce that it has been accredited the International Organisation for Standardization (ISO) 9001:2000 certification for its Quality Management System (QMS), which demonstrates an organization's commitment to business and operation excellence.

The ISO 9001:2000 Standard is an internationally accepted specification for quality management systems created by the ISO to help organizations including InfoWave meet and improve upon customer satisfaction, and product and service quality, while complying with laws, regulations and requirements.

Customers in the transportation, logistics, public safety, homeland security, and defense sectors today rely on InfoWave's Waveon telemetry products and solutions for the implementation of fleet tracking and management applications, and after-sales services to provide the highest quality of support. The voluntary ISO certification assures customers of InfoWave's adherence to documented processes and procedures that ensure continued and on-going improvements in delivering quality products, solutions, and services.

As part of its efforts to achieve this well-recognized certification, InfoWave has established its own QMS to ensure that the company continued its long-standing commitment to customer satisfaction. By identifying areas for improvement, creating recommendations to resolve identified gaps, and executing against these recommendations, InfoWave ensures that it has the processes necessary to consistently improve product, solution and service quality on a regular and quantifiable basis.

"ISO certification supports InfoWave's pursuit of continuous improvement and an on-going commitment to provide our customers assurance of product, solution and service quality. This international standard reinforces our position as the leading provider of telemetry products, solutions and services," said Mr. Loh Choon Seng, Managing Director of InfoWave. "We will continue to identify scope for improvement of our activities to ensure that we maintain the high quality and value that our customers have come to expect from us."

**About InfoWave**

Founded in 2002, InfoWave is a leading provider of wireless communication devices, solutions and services to organizations in the transportation, logistics, public safety, and homeland security and defense industries. Headquartered in Singapore, InfoWave has a distribution network that spans across Asia Pacific, Europe, and Middle East.
